B. Tech.

(SEM. VI) THEORY EXAMINATION 2013-14 GRAPH THEORY

Time: 2 Hours

Total Marks: 50

Note: - Attempt all questions.

1. Answer any four parts:

- $(4 \times 3 = 12)$
- (a) Prove that in a complete graph with n vertices there are (n-1)/2 edge disjoint Hamiltonian circuit, if n is an odd number ≥ 3.
- (b) Prove that a simple graph with n vertices must be connected if it has more than [(n-1) (n-2)]/2 edges.
- (c) Prove that in a every vertex of degree greater than one is a cut vertex.
- (d) Prove that a non separable graph has a nullity $\mu = 1$ if and only if graph is a circuit.
- (e) Prove that an Euler graph cannot have a cut set with an odd number of edges.
- (f) Show that a Hamiltonian path is a tree.

- 2. Answer any two parts:
 - (a) Write Prim's algorithm to find minimal spanning tree.
 - (b) Prove that a spanning tree T of a given weighted connected graph G is shortest spanning tree of G if and only if there exists no other spanning tree of G at a distance of one from T whose weight is smaller than that of T.

 $(6 \times 2 = 12)$

- (c) (i) Draw planar connected graph such that
 - e = 3n-6
 - e < 3n-6
 - (ii) Prove that in a nontrivial tree T there are at least two pendant vertices.
- 3. Answer any three parts of the following: $(6\times2=12)$
 - (a) Prove that a connected planar graph with n vertices and e edges has n e + 2 regions.
 - (b) If every region of a simple planar graph (with e edges and v vertices) embedded in a plane is bounded by k edges, show that e=[k(n-2)]/k-2
 - (c) (i) Show that a complete graph of four vertices is self dual
 - (ii) Using Kuratowski's theorem, show that Petersen's graph is nonplanar.
- 4. Answer any four parts of the following: $(3.5 \times 4 = 14)$
 - (a) Prove that covering h of a graph is minimal if and only if h contains no path of length three or more.
 - (b) Prove that vertices of every planar graph can be properly colored with five colors.

(c) Show that the Chromatic polynomial of a graph of n vertices satisfies inequality

$$P_n(\lambda) \leq \lambda(\lambda-1)^{n-1}$$

- (d) If two graphs G_1 and G_2 are 1-isomorphic, prove that the rank of G_1 equals the rank of G_2 and nullity of G_1 equals the nullity of G_2 .
- (e) Show that a simple connected planer graph with 8 vertices and 13 edges cannot be bichromatic.
- (f) Prove that in a transport network G, the value of flow from source S to sink D is less than or equal to the capacity of any cut that separates S from D.
