(Following Paper ID and Roll No. to be filled in your Answer Book PAPER ID: 2894 Roll No.

B. Tech.

(SEM. VIII) THEORY EXAMINATION 2011-12

SATELLITE COMMUNICATION

Time: 3 Hours

Total Marks: 100

- Note:—(1) Attempt all questions.
 - (2) All questions carry equal marks.
- 1. Attempt any four parts:

 $(4 \times 5 = 20)$

- (a) Explain Geostationary Orbit and satellite axis in brief.
- (b) Write short note on look angle and orbit determination.
- (c) The semi major and semi minor axis of an elliptical satellite orbit are 20,000 km and 1600 km respectively.

 Determine the apogee and perigee distance.
- (d) What are the factors that affect the uplink and downlink design of satellite communication?
- (e) Write short note on different types of antennas used in satellite communication.
- (f) Write short note on launch wehicles used in satelline communication.
- 2. Attempt any four parts:

 $(4\times5=20)$

(a) Derive general link equation. Find out expression for $\frac{C}{N}$ and $\frac{G}{T}$ ratio.

- (b) What are the various interferences that may affect the satellite link performance?
- (c) Two amplifiers are connected in cascades having a gain of 20 dB each. If the noise temperature is 200 K, determine the overall gain.
- (d) Discuss the antenna requirements for large and small earth stations.
- (e) The EIRP of a 240 W transponder is 57 dBw. Calculate the approximate gain of the antenna if the transponder is switched to 120 W, calculate the new EIRP assuming that the same antenna is used.
- (f) Explain TT and C system briefly.
- 3. Attempt any two parts:-

 $(2 \times 10 = 20)$

- (a) Explain the need of modulation, Explain different types of modulation used in satellite communication.
- (b) What is difference between multiplexing and multiple access techniques? What is TDMA super frame? Explain its structure,
- (c) Explain pre-emphasis and de-emphasis in detail. Why it is required? Explain with neat and clean diagram.
- 4. Attempt any two parts:-

 $(2\times10=20)$

- (a) Describe the Rain and Ice effects on propagation in satellite communication.
- (b) Explain linear and cyclic block codes in detail.

(c) The parity check matrix of a (7, 4) linear block code is expressed as :—

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 0 & : & 1 & 0 & 0 \\ 1 & 1 & 0 & 1 & : & 0 & 1 & 0 \\ 1 & 0 & 1 & 1 & : & 0 & 0 & 1 \end{bmatrix}$$

Obtain the generator matrix (G) and list of all code vectors.

5. Attempt any two parts :-

(Z×10=20)

- (a) State and explain various segments of GPS system.
- (b) Write a short note on VSAT.
- (c) Explain LEO satellite in brief. Write a short note on GPS.
